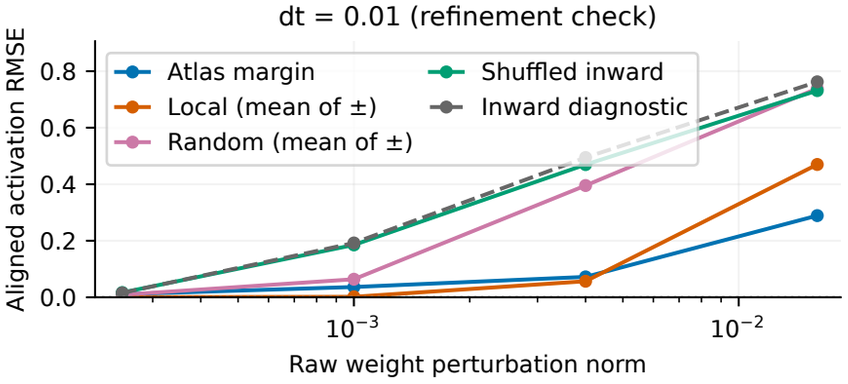
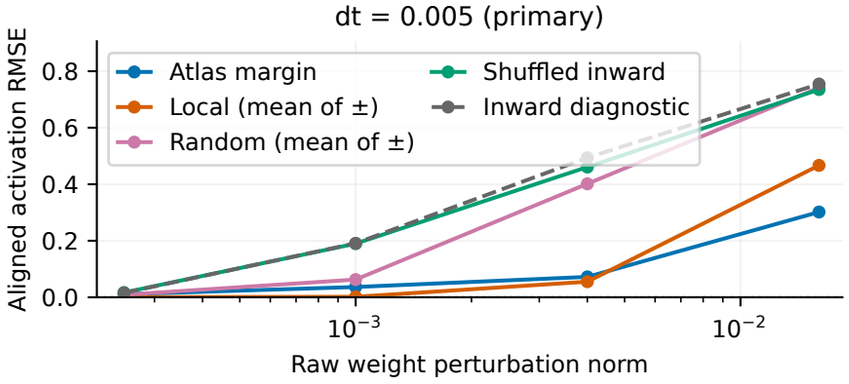
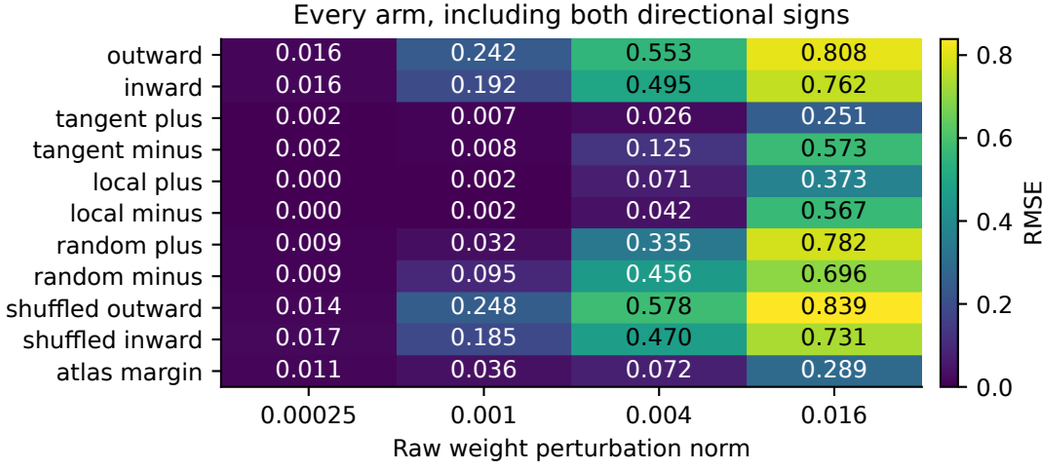
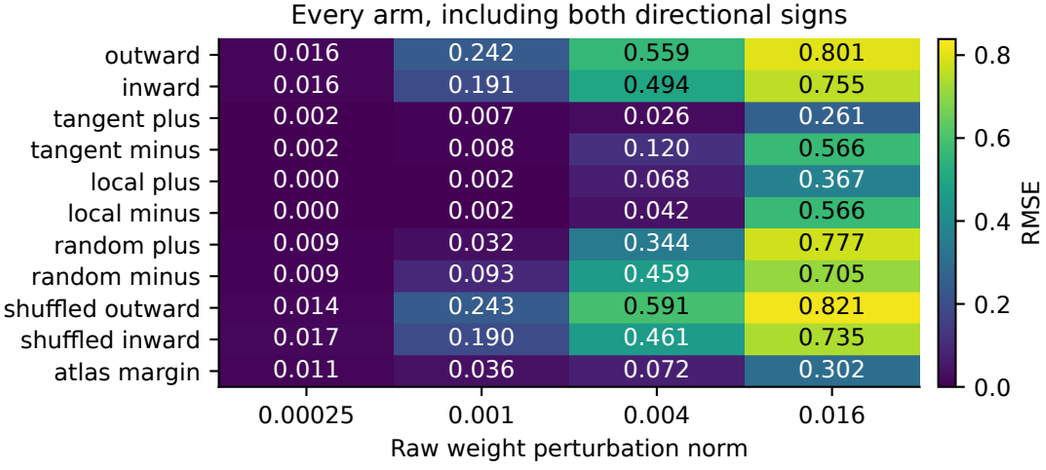
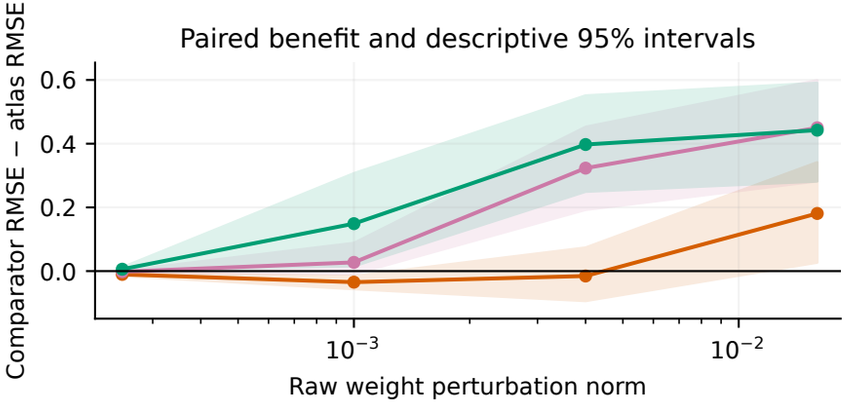
Does the saved shrimp atlas preserve a neural waveform? 12/12 anchors qualified

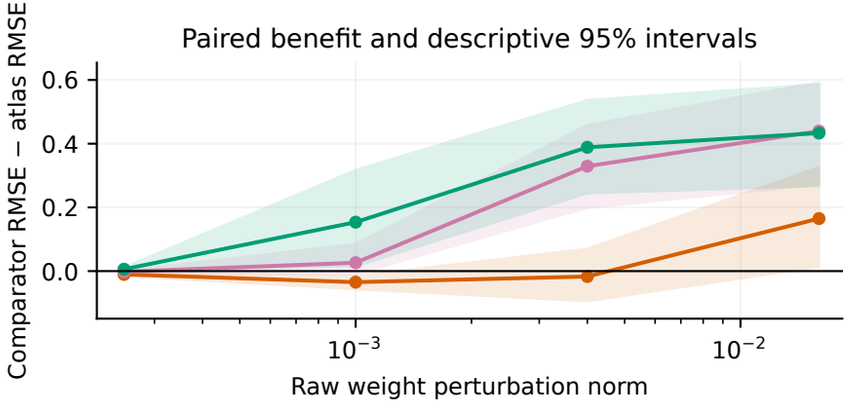












Equal-radius averages:
Local (mean of ±): +0.0301 [-0.0242, +0.0878]
Random (mean of ±): +0.1997 [+0.1486, +0.2488]
Shuffled inward: +0.2487 [+0.1863, +0.3085]

Equal-radius averages:
Local (mean of ±): +0.0257 [-0.0279, +0.0831]
Random (mean of ±): +0.1983 [+0.1481, +0.2451]
Shuffled inward: +0.2454 [+0.1848, +0.3041]

Equal anchor and phase weights; 10,000 anchor-bootstrap draws. Refinement steps are not independent replicates.
Eligible trial statuses: {'complete': 4320}; missing=0, invalid=0. Undefined comparisons remain NA.
Positive benefit favors the atlas policy. One global phase offset is allowed; frequency is not fitted. Dotted line: zero-dose floor.
