Continuation of the network’s nine-peak orbits
Core seed
Retained near-edge seed
Initial gamma direction -1
Initial gamma direction +1
Physical orbit period T
Dominant transverse multiplier
Weight γ (alpha fixed)
-1: 49 nodes, 2/50 failed attempts; maximum_accepted
+1: 49 nodes, 0/48 failed attempts; maximum_accepted
-1: 49 nodes, 1/49 failed attempts; maximum_accepted
+1: 49 nodes, 2/50 failed attempts; maximum_accepted
Attracting
Unstable
Near-unit / undecided
Parameter reversal
Crossing bracket
Checkpoint disagreement
Every accepted node is shown. A failed corrector is unresolved; brackets are numerical candidates.
Multiplier axes: symmetric log, linear within ±2. Signed real multipliers are shown; complex dominant pairs use their modulus.
