A Slice-wise criticality; dashed: adjacent-row sign transitions
d < 0: supercritical (soft onset)
d > 0: subcritical (hard onset)
map: quasi-periodic
map: periodic
map: chaotic
map: divergent
map: unresolved
first Lyapunov coefficient d
strip: fixed-start map label 4 cells beyond each crossing
log10 output-layer rate (independent slice crossing)
B Supercritical points: soft onset
measured amplitude
predicted circle amplitude sqrt(log|mu| / -d)
C Subcritical points: hard onset
measured escape threshold
predicted repelling circle
escape threshold
offset before the slice crossing (decades)
