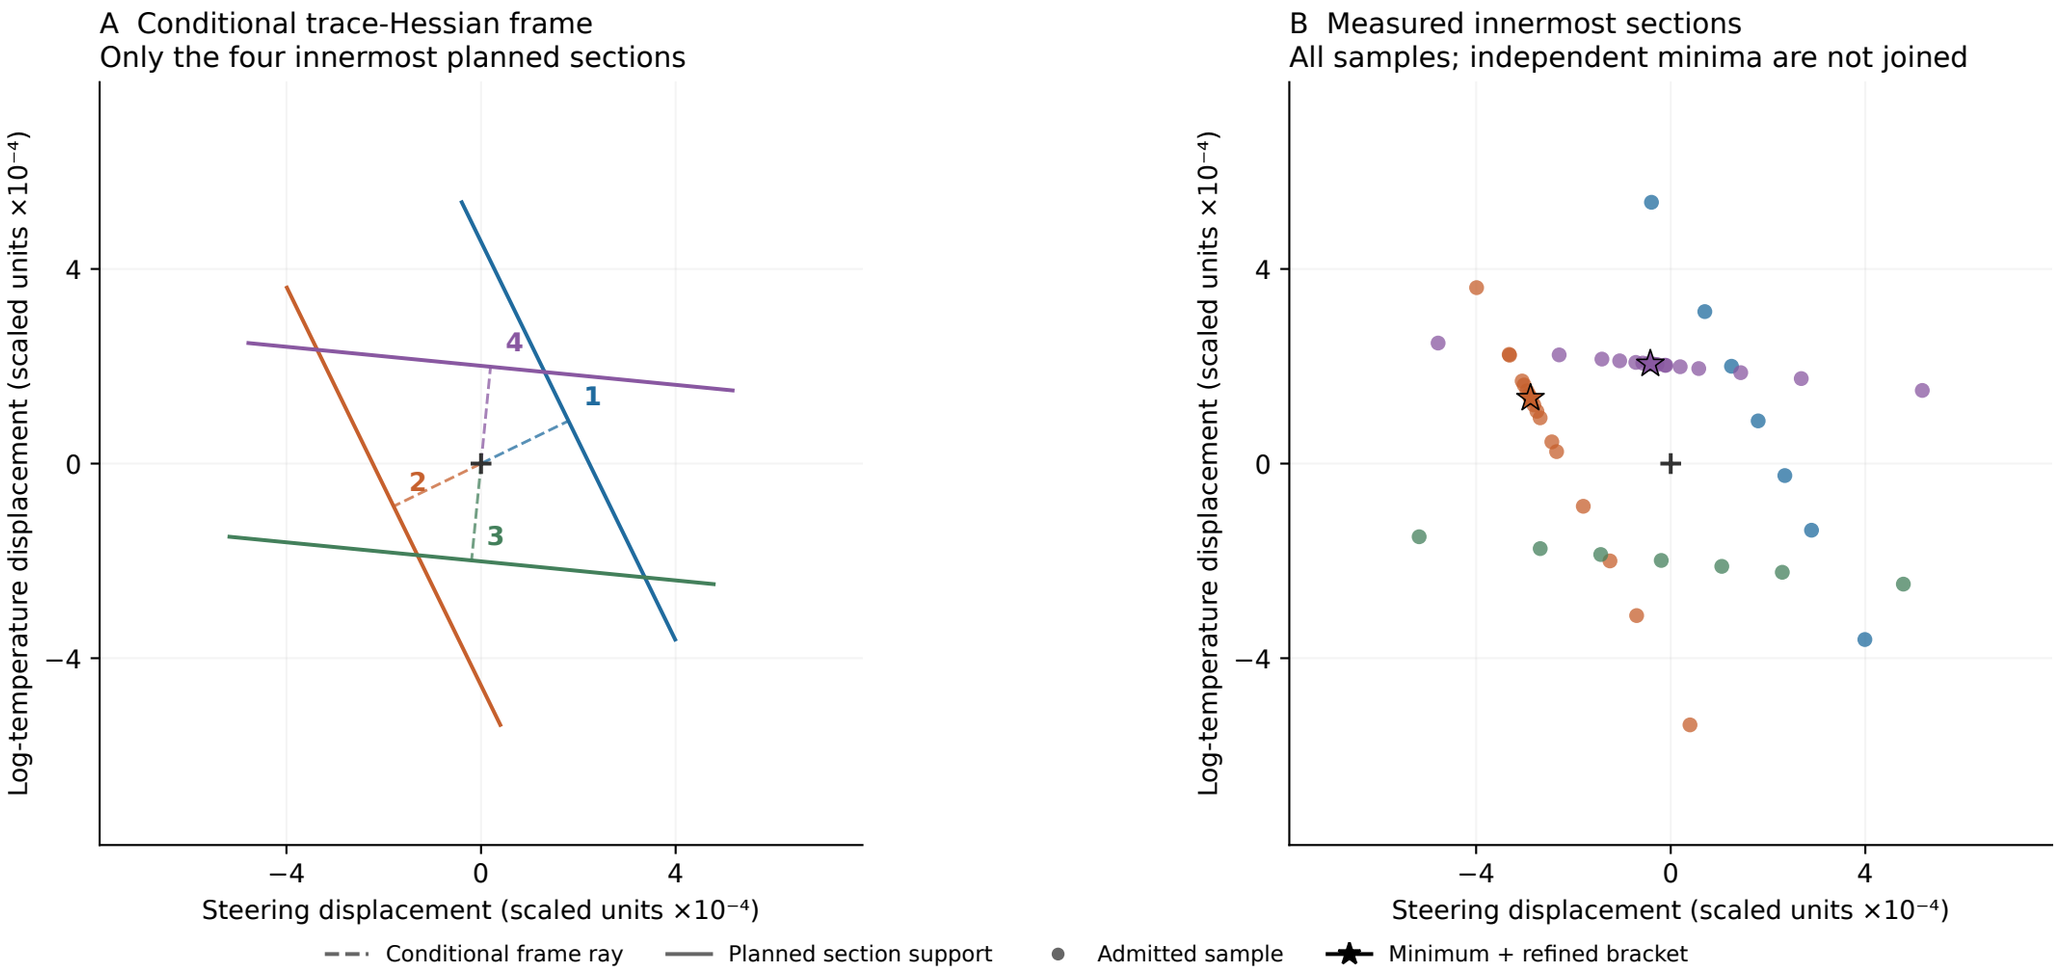
Section-minima pilot — center zoom

Audited innermost sections. Planned longitudinal distance = 0.0002.
Equal axes in the declared scaled Euclidean metric; the display includes the full section supports.



Arm 1: no bracket
7 samples; 0 qualified minima

Arm 2: converged
19 samples; 1 qualified minima

Arm 3: no bracket
7 samples; 0 qualified minima

Arm 4: converged
18 samples; 1 qualified minima

Scaled coordinates: (steering − center) / 2.5e-06 and ($\log_{10}$ temperature − center) / 7.5e-06; both panels show ×10⁻⁴ units.
Black bars are measured final bracket widths, not confidence intervals. Red × / + retain unadmitted samples / unfinished callbacks.
No bracket means no strict minimum bracket on the sampled support. These sections do not establish connected valleys or an exact crossing.
