
Frozen EXP-008 example: information-00, phase 675, norm 0.016, dt=0.005
All four policies select candidate 4; candidate waveforms coincide.
A Neuron 1: original time origin
B Neuron 2: original time origin
C Neuron 3: original time origin
D All 18 candidates; outlined policy choices
Activation $u_1$
Activation $u_2$
Activation $u_3$
Time after weight change
Later 75<t≤300 RMSE
Full 0-75 preview RMSE
Reference: original epoch
Shared baseline (c4)
+ Real geometry (c4)
+ Mismatched geometry (c4)
Minimum preview (c4)
The first declared test origin is retained regardless of qualification or which policy wins. Gray interval: preview 0-75.
Waveforms use the original epoch. Reported RMSE fits one constant phase on its scored interval, separately for each policy.
No frequency fit or time warp. Candidate labels are 0-17; overlapping candidate entries remain separate charged evaluations.
